

Certificate of Course Completion

Amir Al Hamadani

has successfully achieved student level credential for completing the Industrial Cybersecurity Essentials course.

The student was able to proficiently:

- Explain the importance of cybersecurity in Industrial IoT environments.
- Analyze common cyberattack concepts and techniques used against industrial control systems (ICS).
- Explain why it is important to comply with security standards and compliance frameworks such as IEC 62443 and NIST SP 800-82r3.
- Explain the impacts of exploitation of common ICS vulnerabilities and strategies for mitigation.
- Evaluate security risks in industrial systems using risk assessment tools and methodologies.
- Implement secure industrial network architectures, including segmentation and firewall configuration.
- Implement local and remote access control to secure industrial networks.
- Explain techniques for hardening the industrial network Infrastructure.
